

MPB recess former design update

We would like to inform you that our MPB recess former design with separate magnets is replaced by its successor with ring magnet. The old articlenumbers will be omitted as of now.

The recess former consists of a body of polyurethane in which a magnetic ring in a steel casing has been embedded. This improved design, has greater durability and magnetic force and is compatible with the P-anchors in load classes 13 to 100 kN.

Description	Old article number	New article number
MPB-013	45865	63839
MPB-025	46080	63841
MPB-050	46081	63842
MPB-100	46082	63843
