## VACANCY: CIVIL / PRODUCT ENGINEER

### Company description:

**T**erwa is a company with over 25 years of experience producing metal anchoring components for the construction and precast industry. Terwa uses the latest technology and has successfully collaborated with companies / wholesalers all over the world for many years.

A modular business structure allows for continuous adaptation to changing market trends. Thanks to this flexible way of working as well as providing tailor-made solutions, we know how to respond well to the needs of partners and customers in a time when collaboration is more important than ever.

### Job description:

Your work consists of calculating and supervising constructive anchoring proposals for products such as reinforcement systems, lifting and transport anchors, punching reinforcement, sandwich and facade panel anchoring, etc. You act as a 'spider in the web' and work closely with sales and engineering team to work with our customers, mostly concrete manufacturers, distributors and construction companies, to achieve the correct implementation of the projects and tailor-made advice. All this with a high degree of accuracy and independence. You also play a key role in the development of new products and you think about improvements and alternatives.

### Job requirements:

- A completed higher professional education in civil engineering;
- Several years of experience with an engineering firm, contracting company or supplier;
- Familiar with working with product technical calculation software;
- Knowledge of current standards and current building regulations;
- Accurate and independent;
- Good communication skills;
- Solid automation knowledge: Word, Excel, Autocad;
- 3D drawing experience with (Tekla Structures or Autodesk Revit is an advantage);
- Skills in the English language;
- Knowledge of the German language is an advantage;
- Willingness to travel (internationally).
